1. The following is an examiner's statement of reasons for allowance:

For claims 1-7 and 19-25, the prior art fails to teach a combination of a rules table having corresponding rules to the filter information and being related to the mask table by the mask key;

a pointers table containing boundary data related to the rules for corresponding filter information, and
a fast filter processor coupled to the mask table, the rules table and the pointers table, and configured to perform at least one binary search for at least one rule related to a data packet received by the network device at the at least one network pod, the binary search being limited based on the boundary data in the pointers table.

For claims 8-18 and 26-31, the prior art fails to teach a combination of a multiplier coupled to the output of the masks table and to a data packet input, the multiplier configured to multiply a mask output from the masks table and a data packet input from the data packet input and to output a product of the mask and the data packet;

a comparator coupled to the output of the rules table and the output of the multiplier, and configured to compare the product with a rule output from the rules table and to generate a comparison signal,

a multiplexer having a plurality of data inputs and a control input, the control input coupled to an output of the comparator, the multiplexer configured to output an address signal being one of the plurality of data

inputs based on the comparison signal input to the control input .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lor (2003/0091042) is cited to show a system which is considered pertinent to the claimed invention.
